**Subsector I04: ROLLING BEARINGS**

---

**Subsector :** I04 **Registration Date :** 2018-11-21  
**Organization :** ASI  
**Country :** Austria  
**Project ID :** 00027520/0001 **Project**  
**Established**  
**ICS :** 21.100.20  
**National Ref :** ÖNORM M 6320-2  
**Title :** Rolling bearings - Load carrying capacity of rolling bearings - Part 2: System approach of bearing life  
**Scope :** This ÖNORM consider other substantial factors on the rolling bearing life and to allow a more realistic determination of the rolling bearing life. In addition to the standardized calculation method according to ÖNORM M 6320-1, this ÖNORM includes tribological model considerations in relation to the individual elements of the bearing and additional parameters e.g. lubricant properties, impurities, and surface condition.

### Subsector I30: AIR DISTRIBUTION

---

**Subsector :** I30 **Registration Date :** 2018-11-21  
**Organization :** ASI  
**Country :** Austria  
**Project ID :** 00027494/0001 Project Established  
**ICS :** 91.140.30  
**National Ref :** ÖNORM H 6036/A  
**Title :** Ventilation - Ventilation of dwellings or individual dwelling areas according to demand - Planning, assembly, operation and maintenance (Amendment)  
**Scope :** This Austrian Standard deals with planning, assembling as well as operation and maintenance of ventilation systems for apartments and individual dwelling areas and rooms intended for similar use (e.g. dwelling units in hotels or residential establishments).  
 This scope has not been amended, enlarged or limited compared to the latest version of ÖNORM H 6036. Only an adaptation of the designations for filter classes according to ÖNORM EN ISO 16890-series has been carried out, and a so-called conversion table has been introduced which enables a comparison between "old" and "new" filter class designations as well as reference to EU Regulation 1253/2014 and to EU Regulation 1254/2014 has been established. Since this designation has no impact on the above-mentioned planning, assembling, operation and maintenance of ventilation systems, the coherence of the Austrian Standard is still effective. Furthermore, there is a transition period until the moment when the filters according to the withdrawn ÖNORM EN 779, which has been superseded by the ÖNORM EN ISO 16890-series, cannot be used any more.  
**Relatedness :**

<b>Title :</b>	Air purity protection -- Determination of inhalable dust fraction in workplaces by gravimetric method		
<b>Scope :</b>	This standard gives a method for the determination of the content of inhalable dust fraction in workplace air by gravimetric method. The method is applicable during control of the hygienic-sanitary conditions. The lowest concentration of inhalable dust fraction which can be determined under the sampling conditions depends on the type of sampler used. For sampler with a flow rate of 1 l/min and an air sample of 480 l the determination of the method is 0,3 mg/m <sup>3</sup> . For sampler with a flow rate of 10 l/min flow rate and an air sample 4800 l the determination is 0,03 mg/m <sup>3</sup> .

**National Ref :** prNP 4564  
**Title :** Accessibilities - Tactile paving surfaces in outdoor public space  
**Scope :** This Draft Standard has a primary goal to establish a system of tactile pavings to be applied in pedestrian outdoor public spaces. It specifies the technical and dimensional requirements that should be met, as well as, its rules of appliance, in order to promote simple, coherent solutions and easy to apply when improving accessibility to people with visual limitations. Define requirements to manufacture tactile paving, as well as the principles of its applicability, in order to provide standardisation that can be easily perceptible to people with visual impairment and helping with their autonomy in public space. This Draft Standard sets out criterias and technical requirements, to be observed upon its conceptual approach in outdoor public spaces, followed by construction, setup and adaptation of spaces and urban equipment's to the conditions of accessibility. The establishment of these criterias and technical requirements are based in technical rules which, so far, have given great results. This Draft Standard requirements should be applied in the following basic elements of public space: a) pedestrian crossings at the same level; b) public transport terminals and other points of interest; c) stairs; d) ramps; e) wide spaces more likely to cause disorientation. However, tactile pavings should only be used, when its application is indeed an element of easy comprehension of space, since its overuse can counteract its aim. In the same way, the usage of tactile pavings should be avoided in situations where its immediate surrounding is designed with excessively textured pavements causing its perception difficulty.
