National Ref : ÖNORM EN 16798-1/A

Title : Annex A / national Foreword for Energy performance of buildings — Ventilation for buildings, Part 1: Indoor environmental input parameters for design and assessment of energy performance of buildings addressing indoor air quality, thermal environment, lighting, and acoustics — Module M1-6

Scope : This document specifies requirements for indoor environmental parameters for thermal environment, indoor air quality, lighting and acoustics and specifies how to establish these parameters for building system design and energy performance calculations. This European Standard includes design criteria for the local thermal discomfort factors, draught, radiant temperature asymmetry, vertical air temperature differences and floor surface temperature. This European Standard is applicable where the criteria for indoor environment are set by human occupancy and where the production or process does not have a major impact on indoor environment. This European Standard also specifies occupancy schedules to be used in standard energy calculations and how different categories of criteria for the indoor environment can be used. The criteria in this European Standard can also be used in national calculation methods. This standard sets criteria for the indoor environment based on existing standards and reports listed under normative references or in the bibliography. This European Standard does not specify design methods, but gives input parameters to the design of building envelope, heating, cooling, ventilation, lighting.

National Ref : ÖNORM B 3124
Title : Testing of natural rock – Mechanical properties of rock – Complete stress-strain curve under uniaxial compressive loading
Scope : This ÖNORM is to be used for the determination of the complete stress-strain-curve and the deduction of strength and deformation parameters (modulus of elasticity, Poisson's ratio, deformation modulus) under short-term uniaxial compressive loading of solid rock. The scope includes the determination of the mentioned properties regarding characterisation and classification of rocks as well as the derivation of their characteristic values for geotechnical questions, especially geostatic calculation methods. Excluded from the scope of this ÖNORM are the provisions on compressive strength and modulus of elasticity of ashlar made of natural stone contained in ÖNORM EN 1926 and ÖNORM EN 14580.

Title : Infrastructures for telecommunication networks. Part 7: Installation of small area wireless access points in existing urban infrastructures
Scope : The purpose of this standard is to define the general conditions for the installation of Small Area Wireless Access Points, known as SAWAPS. The main purpose of these access points is to allow the densification of the electronic communications networks of operators or municipal services in order to provide them with greater capacity. They are therefore designed to be placed in an urban environment on existing elements of public furniture, on poles and columns of outdoor lighting or road signs. The standard covers precautions, construction conditions and installation methods for these systems mounted on existing public furniture infrastructures. This standard, although not specifically, can also serve as a reference for installations on supports specifically designed for SAWAPS.

Title : Residential placement services. Application of the EN ISO 9001:2015 Standard in residential placement services.
Scope : This standard specifies the requirements for a quality management system where an organization providing residential placement services:

a) needs to demonstrate its ability to regularly provide residential placement services that meet the requirements of the recipient of the service and applicable laws and regulations, and

b) aims to increase the satisfaction of the recipient of the service through the effective implementation of the system, including processes for system improvement and ensuring compliance with the requirements of the recipient of the service and applicable laws and regulations.

All requirements of this standard are intended to apply to all organizations providing residential placement services, regardless of their structure, nature, location or size.

This standard sets out the requirements for the quality management system specific to the residential placement services sector.

It incorporates the UNE- EN ISO 9001: 2015 standard and adds additional requirements interpretations, explanations and examples.

This standard is independent of the UNE-EN ISO 9001 standard and can be used for conformity assessment and for certification purposes of organizations providing residential placement services.

National Ref :	PNE 66184		
Title :	Requirements for the improvement of the design process in the framework of ISO 9001		
Scope :	This standard provides requirements and recommendations to help organisations to implement design processes in a way that is compatible and complementary to those specified in UNE-EN ISO 9001.		

This standard aims to help the organisation to improve its design process, taking the context of quality management as a reference.

It covers the requirements for the deployment of the design process both in the field of product design and in the field of services.

Through the fulfilment of the requirements established in this standard, for this specific design process, it is possible to obtain a certification in its performance for any organisation, whether or not it has an ISO 9001 management system in place, contributing to the improvement of the development of this process.

The standard enables self-assessment and certification that the organisation is at one of two

possible levels of performance of the design process, basic or advanced level.

Title :	Non-regulated professions - Security professional - knowledge, skills, autonomy and responsibility requirements		
Scope :	<p>The standard defines the requirements for the professional activity of the Security Professional, i.e. the person whose knowledge, skills and competences are such as to guarantee the overall management of the security process or relevant sub-processes. The standard outlines three levels of the professional profile according to organisational contexts of varying complexity, providing a useful support to organisations and other interested parties in identifying the professional with the level best suited to their needs. The role of the Security Professional is divided into the following levels</p> <ul style="list-style-type: none"> - Security Expert <p>First level (operational) Security Professional: oriented to a "medium" complexity of security, considering the Organisation and the activities performed.</p> <ul style="list-style-type: none"> - Security Manager <p>Second level (managerial) Security Professional: oriented to a "medium - high" security complexity, considering the Organisation and the activities performed.</p> <ul style="list-style-type: none"> - Senior Security Manager <p>Third level Security Professional (high managerial): oriented towards the "maximum" complexity of security, considering the Organisation and the activities performed. These requirements are specified, starting from the specific tasks and activities and the identification of the relative contents, in terms of knowledge and skills, also in order to clearly identify the level of autonomy and responsibility in coherence with the National Qualification Framework (NQF). These requirements are also expressed in such a way as to facilitate and help make the related conformity assessment processes homogeneous and transparent as far as possible.</p>
